Gonzales Rios, Lady Alexandra ([orcid.org/0000-0001-5037-3997](https://orcid.org/0000-0001-5037-3997))

**ASESORA:**

Ms. Bartra Gómez Jaqueline ([orcid.org/0000-0002-2745-1587](https://orcid.org/0000-0002-2745-1587))

**LÍNEA DE INVESTIGACIÓN:**

Arquitectura

**Línea de responsabilidad social universitaria:**

Desarrollo sostenible y adaptación al cambio climático

**TARAPOTO – PERÚ**

**2022**

## **DEDICATORIA**

Dedico mi tesis en primer lugar a Dios que sin Él no lo hubiese logrado, a mi novio, familia y amigos que me apoyaron, creyeron en mí y en mi capacidad para poder llegar hasta aquí. No ha sido fácil, pero se logró.

Es para mí una gran satisfacción poder dedicarles a ellos, lo que con trabajo, esmero y esfuerzo me lo gané.

## **AGRADECIMIENTO**

En primer lugar, dar gracias a Dios por permitirme vivir cada experiencia en mi camino como estudiante universitaria, agradezco a mis padres que siempre me dieron una buena educación a la medida que estuvo en sus posibilidades, en especial a mi mamá. Profundamente agradecida con mi novio quien desde el inicio me motivó a seguir, fue mi compañía en los desvelos, fue mi aliento en los desánimos y una luz cuando las cosas se complicaron, le agradezco por ser parte de este proceso y quedarse hasta el final. Asimismo, a mis amigos, que me apoyaron para que este sueño fuera posible, Isaac, Roy Fernando y Ronald. Así como también a mis docentes quienes desempeñaron su labor de la mejor manera, a mis asesoras de tesis, a los arquitectos que me compartieron sus conocimientos para resolver mis dudas.

## RESUMEN

Esta investigación tuvo como objetivo determinar el confort térmico en la infraestructura deportiva coliseo cerrado en la ciudad de Tarapoto, el tipo de investigación fue cuantitativa de corte longitudinal descriptivo, no experimental. Los resultados obtenidos mostraron que el nivel de humedad en el coliseo cerrado fue calificado por el 47% de los encuestados como malo y muy malo; la sensación térmica en el aire fue calificada en un 43% como mala y muy mala, asimismo el 77% de los encuestados mencionó que preferiría mayor ventilación. A la conclusión que se llegó mediante los resultados obtenidos en el estudio fue que la mencionada infraestructura carece de confort térmico debido a sensación de calor dentro del lugar y su elevado nivel de humedad, el cual excede un 12% al máximo aceptable.

**Palabras clave:** Arquitectura deportiva, datos climáticos, instalación deportiva.

## **ABSTRACT**

The objective of this research was to determine the thermal comfort in the closed coliseum sports infrastructure in the city of Tarapoto, through data analysis and the application of instruments such as the compilation of reference documentation to the subject and the questionnaire; Note that equipment such as hygrometers and thermographic cameras were used. With the use of the instruments described, a series of questions were asked about the perception of the occupants' sensation in the room, their preference in terms of ventilation, sensation of humidity and opinions about the materiality and the current state of the building. infrastructure-ra. The conclusion reached through the results obtained in the study was that the aforementioned infrastructure lacks thermal comfort due to a sensation of heat inside the place and its high level of humidity, which exceeds 12% of the maximum acceptable.

**Keywords:** Sports architecture, climatic data, sports facility.

## I. INTRODUCCIÓN

El cambio climático afecta a todo el mundo de muchas maneras, indicó un informe publicado por (Prensa & Ipcc, 2022). Existieron progresos de la ciencia desde el 2013 que permitió a más de 2 centenares de científicos que fueron partícipes en el reporte, dar una noticia tan seria como importante: la influencia de los seres humanos ha sobrecalentado el planeta tierra a una velocidad sin antecedentes en 2 milenios. Y aun así no sería posible aminorar la propagación de emanaciones del efecto invernadero, la temperatura estará en aumento y de esa manera se posibilita que en 18 años sobrepase el límite considerado seguro por el Acuerdo de París, 1.5 °C. (Sólo en un proscenio donde existan menores difusiones se aduce que la temperatura mundial pueda disminuir a finales de 100 años por debajo de 1,5 °C). Determinados acontecimientos son irreversibles en quizás cientos o miles de años.

Mientras que, en América del Sur en un estudio realizado por la (academia brasileira de ciencias, s.f.) se relacionó las condiciones meteorológicas con el confort térmico tanto de los espectadores como de los deportistas durante algunos eventos deportivos de alto rendimiento. Aproximadamente 50 de los 100 espectadores entrevistados expresaron que las condiciones fueron cómodas durante el período estudiado. Los índices de confort térmico humano han sido ampliamente utilizados en investigaciones que involucran termorregulación humana. La evidencia muestra que la acción combinada de variables meteorológicas influye en la manera de vivir y las actividades diarias de la población humana, ya sea en reposo o en actividades físicas de alto rendimiento.

El tercer país con más probabilidades a verse afectado respecto a los riesgos climáticos es Perú ya que en los últimos 10 años, las urgencias por las amenazas de la naturaleza se multiplicaron más de 6 veces, de los cuales el 72% de ellas fueron por origen climático; y en las últimas 3 décadas, se ha extinto cerca del 22% de la extensión de los glaciares, que equivale al 71 % de los glaciares tropicales del planeta. Esto representa 7 000 millones de metros cúbicos de agua, que es igual al consumo de la población de Lima durante 10años; Al menos el 80% de la electricidad de la cual somos usuarios se genera en centrales hidroeléctricas; El país no

cuenta con los recursos económicos ni científicos para adaptarse y actuar frente a estos problemas.

Mientras que al interior del país en la región selva, la ciudad de Tarapoto se caracteriza por tener temperaturas altas y lluvias constantes. Según Senamhi la temperatura promedio diario de la ciudad varía entre 25 °C a 32°. Las elevadas temperaturas: Exceden los límites del confort térmico, generando incomodidad. Y a su vez generando humedad relativa; existencia de precipitaciones tempestuosas, el clima a lo largo del año generalmente es estable y uniforme, rondando entre los 34°C y 20°C. La temperatura es bastante variada y las edificaciones deben cumplir con ciertos estándares de confort para que las actividades se puedan desarrollar de la mejor manera, en mayor proporción aquellas actividades que demandan mayor esfuerzo físico, como es la situación de los centros deportivos. La temperatura de la ciudad es lo principal a considerar para luego adaptar la arquitectura junto a los principios de diseño apropiados para un mejor confort de los usuarios dentro de la infraestructura.

Planteamiento del **problema general** es el siguiente: ¿De qué manera influye el confort térmico en la infraestructura deportiva Coliseo Cerrado? Respecto a los **problemas específicos**, se plantea lo siguiente: (i) ¿Cuáles son los aspectos a evaluar para conocer el nivel de confort térmico actual de la infraestructura deportiva?, (ii) ¿Cuáles son las necesidades de la infraestructura deportiva Coliseo cerrado para alcanzar el confort térmico? Y (iii) ¿Cuáles son las características arquitectónicas que debe cumplir una infraestructura deportiva para cubrir las necesidades de confort térmico de sus usuarios?

Esta investigación se justifica por **conveniencia**, los parámetros físicos y ambientales presentados justifican el beneficio de tener ambientes habitables con confort térmico. Por **relevancia social**, con la información recaudada se obtendrá un diagnóstico de la problemática actual en la infraestructura deportiva analizado en cuanto a confort térmico. De esta manera la investigación podrá llegar a conclusiones las cuales dan como resultado recomendaciones que contribuirán con el confort tér-

mico en la infraestructura deportiva Coliseo cerrado, así mismo mejorará la experiencia de los usuarios al hacer uso de los equipamientos. Por **valor teórico**, las teorías recaudadas darán a conocer las condiciones de habitabilidad en cuanto a confort térmico en la infraestructura deportiva estudiada. En cuanto a las **implicaciones prácticas**, la investigación contribuirá información veraz que podría servir para desarrollar futuros proyectos o trabajos vinculados al tema. Y por **unidad metodológica**, con esta investigación se busca diagnosticar, analizar y resolver a través de recomendaciones la carencia de confort térmico dentro de la infraestructura deportiva.

Así mismos se plantea como **objetivo general**: Determinar el confort térmico en la infraestructura deportiva coliseo cerrado; y los **objetivos específicos** planteados son: (i) Identificar las características del confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto; (ii) Analizar el estado actual de la infraestructura deportiva Coliseo cerrado en Tarapoto y (iii) Establecer las necesidades de los usuarios con respecto al confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto. La **hipótesis** El confort térmico influye positivamente en la infraestructura deportiva Coliseo Cerrado Tarapoto, 2022.

## II. MARCO TEÓRICO

Subsiguientemente, se presentará los antecedentes Internacionales, tal como (Fletcher et al., 2020), tiene como objetivo evaluar las implicaciones de utilizar el índice PMV para evaluar los niveles de confort en instalaciones deportivas. Cuyo tipo de investigación es básica y de diseño experimental. La población estudiada es un MPSH (construcción deportiva interior más común) ubicado en un campus universitario en el norte de Inglaterra. La técnica utilizada fue la recopilación de datos y el método PMV mediante los instrumentos de encuesta de sensaciones térmicas, equipos de medida ambiental y estándares de confort. Se concluye que análisis presentado confirma que, si se usa según las instrucciones de BS EN ISO 7730:2005, existe una limitación significativa en la precisión predictiva del índice PMV cuando se usa en el contexto de una instalación deportiva. Para superar esto, se realizaron modificaciones metodológicas en relación con el límite superior de la tasa metabólica, el enfoque de las actividades de ponderación con múltiples fases de ejercicio y la fuente de las tasas metabólicas de referencia.

Por consiguiente, (Li et al., 2022), esta investigación tiene como objetivo prolongar el tiempo de ejercicio aceptable para los deportistas en PSE mediante la optimización de las estrategias de diseño. Del cual el tipo de investigación es de carácter aplicada y de diseño experimental. La población fueron 28 alumnos de la Universidad Tecnológica del Sur de China. La técnica usada fue la recolección de datos mediante la encuesta, fichas de observación y los instrumentos utilizados fueron el sensor de bulbo negro de radiación térmica, sensor de velocidad del viento de hilo caliente, sensor de calidad de aire interior y reloj óptico de frecuencia cardiaca. Se concluye que, cuando se practica deporte la temperatura promedio de la piel baja y luego sube. Sin embargo, durante la transición a la fase de reposo, la tendencia de los cambios en la temperatura de la piel fue opuesta a la de la fase de estrés. Esto se debe a que existe un flujo de aire cuando se está en movimiento, pero no cuando está sentado, y la velocidad relativa del aire puede aumentar la disipación de la calidez por medio de la gasificación y convección. Por lo tanto, la velocidad del aire tiene un efecto refrescante sobre los atletas en movimiento.

Así como, (Wang et al., 2021), en su estudio tiene como finalidad estudiar sobre el confort térmico de la arquitectura de gimnasios en climas cálidos y húmedos. Cuyo tipo de investigación es de carácter aplicada y de diseño no experimental. En cuanto a la población a estudiar se seleccionó tres gimnasios con diferentes formas de interfaz típicas en Guangzhou (China) para investigar el efecto de la forma de interfaz del edificio de los gimnasios en el confort térmico en climas cálidos y húmedos. La técnica usada fue la recopilación de datos mediante mediciones reales en términos de temperatura del aire, temperatura radiante media, velocidad del aire, humedad relativa, vestimenta y tasa metabólica. Se concluye que la influencia de la forma de interfaz superior del gimnasio en el confort térmico estuvo dominada principalmente por la temperatura radiante media, y el confort térmico podría mejorarse controlando la radiación de la parte superior de los edificios podría reducirse mediante la construcción de techos dobles donde se intercala la capa de aire, similar a la forma de interfaz superior de SCUT Gym.

Así mismo (Shao, 2021) cuya investigación tiene como objetivo de estudio utilizar el índice de confort térmico del voto medio previsto (PMV) y la construcción ecológica para analizar el sistema de control inteligente del ambiente interior. El tipo de investigación utilizada fue experimental, de tipo cuantitativa. La población en estudio fue un edificio universitario de topología compleja (no especifica nombres) con 344 compartimentos y 2072 personas en condiciones de verano e invierno. La técnica utilizada fue la recopilación de datos mediante documentación existente, investigación numérica sobre el control del sistema HVAC basado en el índice PMV en edificios universitarios de topología compleja; como instrumento principal se usó un software de simulación numérica para simular el comportamiento térmico del edificio. Se concluye que el modo de control de temperatura anterior (aire acondicionado) no logró reducir el consumo de energía y controlar la comodidad de las personas no es lo suficientemente preciso. Si la temperatura del ambiente exterior, la humedad, la velocidad del aire y otros parámetros cambian, el valor PMV interior también cambiará, lo que no puede proporcionar una temperatura constante cómoda para el cuerpo humano.

Tal como (Xue & Zhao, 2021), esta investigación tiene como objetivo estudiar a profundidad el confort térmico en los edificios y así, al mismo tiempo que protege el entorno circundante y aumenta el valor de la utilización de recursos, minimiza el impacto negativo del edificio en el entorno circundante, reduce efectivamente los costos operativos y logra el rendimiento de costo más alto. Cuyo tipo de investigación es de carácter aplicada y de diseño no experimental. La población estudiada fueron edificios basados en el concepto de ahorro de energía (no especifica nombre). La técnica usada fue la recopilación de datos mediante el instrumento de las encuestas, tablas de medición de confort y softwares para medir el confort. Se concluye que los factores externos como la velocidad del viento, la temperatura y la humedad tienen diferentes grados de influencia en el confort térmico del cuerpo humano. Entre ellos, la temperatura tiene el mayor impacto, y también se requiere la elección de los materiales de construcción, considerando el coeficiente de transferencia de calor y el consumo de energía.

Tales como, (González de Uña et al., 2018), cuyo objetivo es evaluar el importe imparcial y los niveles de bienestar de cada variable físicas del ambiente térmico que producen un resultado importante en la sensación térmica de personas jóvenes, en edad adulta, residentes de la ciudad de Pachuca, Hidalgo, en bioclima semi frío seco. Cuyo modelo de investigación es básico con un diseño no experimental; la población estudiada fueron los adultos jóvenes domiciliados en la ciudad de Pachuca, en bioclima semi frío seco; específicamente, los estudiantes del itp (asistentes de salones ventilados naturalmente). La técnica empleada fue la recopilación de datos y el instrumento de medición de temperatura fue termómetros ambientales para la obtención de la humedad relativa, el punto de rocío, la temperatura y la sensación térmica. Se concluye que los niveles de bienestar térmico alcanzados con las investigaciones aplicadas a desde un planteamiento predictivo infravaloran la cabida de aclimatación de los participantes.

Por ejemplo, (González et al., 2020), esta investigación tiene como objetivo evaluar los modelos existentes de confort térmico para establecer comparaciones entre los mismos, analizar posibles dependencias entre sus factores y parámetros y la influencia de los mismos en el índice de confort o estrés térmico. La población se evalúa a nivel internacional, ya que compara todos los modelos de confort existentes. La técnica usada fue el análisis y mediante los instrumentos que son los documentos datos y tablas de medición. Se concluye que, en la actualidad la mayor parte de los edificios para proporcionar confort, no explotan las potencialidades tecnológicas en las estrategias de control de sistemas de calentamiento y enfriamiento, sino que se realizan controles mono variables que dan lugar a la variable temperatura y limitando el poder de otras variables que tienen influencia en el agrado de los asiduos.

Tal como (Uribe, Calderon et al., n.d.) cuya finalidad es el estudio de temperatura de un hábitat no formal en desarrollo de autoconstrucción emplazado en Bosa, un distrito popular acomodado al sur occidente de Bogotá. Su tipo de estudio es aplicado y de diseño no experimental. La población estudiada es son los residentes del habilidad informal. La técnica aplicada es la recopilación de datos mediante los instrumentos que en este caso fue la recopilación de documentos de temas similares. Se concluye que, mediante la integración de un desenlace constructivo sustentable, es posible optimar el bienestar térmico en un hábitat autoconstruido.

Los antecedentes nacionales ayudarán a tener un panorama más cercano a la realidad estudiada. Así como (Molina-fuertes & Horn-mutschler, 2020), cuyo objetivo fue evaluar de manera experimental el desenvolvimiento térmico de un Módulo de Vivienda (MEV), edificado en la zona Alto Andina, por medio de la valoración sistemática de 12 composiciones de eficacia; el objetivo se basa en los valores de temperatura y humedad, teniendo en cuenta la primera como el primer parámetro de análisis térmico para validar el cumplimiento térmico del Módulo de Vivienda por medio de los cambios de temperatura interior conforme al exterior, según la configuración del Módulo de Vivienda dado a que la modificación entre la temperatura

diaria regular interior y exterior revela la eficacia de las habilidades de calentamiento o enfriamiento. El tipo de estudio fue experimental, con un diseño descriptivo cuantitativo. La población estudiada son las viviendas construidas en la región Alto Andina del Perú. La técnica usada fue la recopilación de datos a través del instrumento que fue la documentación técnica emitida por el estado peruano. Se concluye que el modo de operar y manipulación consciente de las piezas de una vivienda, son parte de un papel significativo que va más allá que las implementaciones realizadas en ella. Sin un buen manejo de las infiltraciones que pueda haber en una residencia ya sea por los vanos, no será probable lograr el perfeccionamiento de los aumentos de temperatura esperada para un confort térmico y, de lo opuesto, se obtendrá una sensación de inconfort térmico.

Para (Arturo et al., 2018), la finalidad de esta investigación fue la valuación del bienestar térmico dentro de un dormitorio de experimentación (HP) de adobe y elementos del sector alto andino del Perú, como la piedra andesita que tiene propiedades acumulativas calor. Cuyo tipo de investigación es básica y de diseño experimental. La población estudiada es la zona sur alto andina, específicamente la muestra es de las ciudades Puno, Arequipa y Cusco. La técnica usada fue la recopilación de datos mediante el instrumento de la sonda térmica. La conclusión a la que se llegó es que los implementos de edificación utilizados en el SAEC, tienen propiedad de recopilación de calor. Porque la edificación sustentable de una vivienda se obtiene empleando materiales del lugar como el barro, madera y yeso, para preservar el calor y alcanzar el bienestar térmico dentro de la habitación.

Por consiguiente, se presenta teorías relacionadas que dan una mejor comprensión del artículo. Según (García del Campo et al., 2021), quien define el **confort térmico** como la expresión parcial de armonía con el ambiente térmico. De hecho, se puede decir que hay bienestar térmico o sensación neutra en cuanto al ambiente actual, cuando los individuos no perciben sensación ni de calor ni frío; es decir, cuando la naturaleza de la temperatura, humedad y corriente del aire son beneficiosas a la actividad que desenvuelven. Mientras que (Blender, 2015) define el *confort térmico* como la sensación que manifiesta el bienestar de los individuos de las edificaciones

con el ambiente térmico. Por ende, es relativo y responde a diferentes circunstancias. El cuerpo “desecha” alimento y produce calor, similar a las máquinas. Y en cuanto a **infraestructuras deportivas** según (Marina, 2021) se define como instalaciones conformadas por el equipamiento y los servicios en relación que en su conjunto brindan las prestaciones deportivas a una comunidad determinada.

Según (Marina, 2021) Para que podamos respirar aire de buena calidad, la humedad debe mantenerse entre el 40% y el 60%. Si este valor es inferior al 40%, podemos experimentar sequedad de ojos, piel y mucosas, así como enfermedades respiratorias infecciosas como resfriados, gripe y bronquiolitis. Por el contrario, una humedad superior al 60 % puede causar problemas de humedad, ya que la condensación se alimenta de ácaros, hongos y mohos, lo que desencadena asma, alergias e infecciones respiratorias.

La arquitecta (Blender,2015) define la temperatura del viento como: “la cantidad de calor que el cuerpo desprende respecto al aire”, especialmente por convección. La temperatura del aire tiende a ser suficiente para conceptualizar el bienestar térmico, siempre que la humedad junto la velocidad del aire y el calor no intervengan demasiado en el clima interno. Los niveles de confort se amplían desde los 20°C aproximadamente en invierno hasta alrededor de los 25°C en verano. Para alcanzar el óptimo nivel de bienestar es primordial tener en cuenta el gradiente térmico vertical. Se recomienda que a lo largo del cuerpo no exista una distinción mayor a 3 Kelvin. Los cambios de temperatura repentinos y fuertes no son deseables; ya que la temperatura del aire comprendida como confortable está estrictamente relacionada con los elementos ambientales, de tal forma que una temperatura ambiental poco satisfactorio puede contrapesarse en ciertos niveles, a través de los factores ambientales.

Mientras que (Picón-Jaimes Y., et al., 2020) define la *termorregulación* como un mecanismo normal del organismo que radica en la estimulación de procesos centrales y circundantes para conservar la homeostasis corporal y las funciones vitales regulares. Está vinculada con el equilibrio en los procesos del corazón, respiratorios, de los riñones, del sistema endocrino, del sistema nervioso y el funcionamiento

de la masa muscular; así como también muestra vías complicadas que aprueban un lazo estrecho entre incentivo y respuestas donde se implican las vías aferentes y eferentes. Concibe procesos controlados por el hipotálamo, acciona por medio de un sistema de retroalimentación que posibilita el incremento o aminoración de la temperatura como resultado a las circunstancias medioambientales por la comunicación que obtiene de los diferentes sensores térmicos (neuronas especializadas que perciben el frío y el calor), son los que tienen la propiedad de identificar los cambios en la temperatura interna del cuerpo y contrastarla con la del medio. Los receptores se encuentran en la dermis, la medula espinal, en los órganos internos y en la parte trasera del hipotálamo, teniendo como valorización referencial 37 grados centígrados.

Según la última actualización de la OMS (2020) define la *actividad física* como cualquier meneo del cuerpo producido por los músculos. La actividad física hace mención a todo movimiento, inclusive durante el tiempo de reposo, para movilizarse a diversos sitios. Se ha comprobado que la actividad física iguala, apoya en prevenir y controlar las dolencias no transmisibles, de igual forma ayuda a prevenir la hipertensión, a tener un peso saludable y tiende a mejorar la salud mental.

Según Figallo et. Al. (2016) *Una instalación deportiva* puede contar con un solo espacio o varios, cada uno dedicado a una disciplina distinta. Mientras que Fernández (2017) menciona que la relación más evidente entre el deporte y la arquitectura es el estadio, cuyo principio y desenvolvimiento contó con el empuje fundamental de la nueva necesidad de junta y colaboración iniciada al calor de las masas en la historia.

### **III. METODOLOGÍA**

#### **3.1. Tipo y diseño de investigación**

##### **Tipo de Investigación**

El trabajo es de tipo básico cuantitativo, pues recoge los métodos de las tecnologías físico-naturales, reconocidos como el prototipo de la inteligencia científica. Desde esta manera de ver, la finalidad de la investigación es aclarar, pronosticar y prever los fenómenos. Se marcan las hipótesis, que llegan a ser conjeturas entre lo existente y lo que se proyecta en un plan para ponerlos a prueba, se calculan las descripciones incluidas en las hipótesis y se cambian los cálculos en números. Emplea la toma y el proceso de los datos, junto con los parámetros lógicos, cree en la medición numérica, el conteo y se cambian las mediciones en números cuantificables para posteriormente ser analizados con métodos estadísticos y sustraer los datos obtenidos a un universo más amplio. Dichos estudios llevan a cuantificar y aportar certeza a la teoría prevaleciente; la cual es preservada hasta ser contradicha o se pueda lograr una mejor explicación. (Gómez 2018).

##### **Diseño de Investigación**

El diseño de la investigación será no experimental de corte longitudinal descriptivo; Valderrama (2016) menciona que una investigación no experimental analiza el comportamiento natural de una o más variables dentro de un medio específico; igualmente, una investigación longitudinal, es un tipo de diseño de investigación que trata de analizar y examinar a los mismos individuos por un tiempo prolongado (Myers, 2006).

De acuerdo a lo referido con anterioridad, el esquema de estudio fue el siguiente:

Diseño de investigación:

**Dónde:**

**M** : Muestra

**V<sub>1</sub>** : Confort térmico

**V<sub>2</sub>** : Infraestructura deportiva

**R** : Relación

### **3.2. Variables y operacionalización**

**Definición conceptual.**

**Variables:**

#### **Confort Térmico**

Según es Givoni (1989) lo conceptualiza como “la carencia de malestar térmico”, definido por las circunstancias climáticas tomadas como admisibles y confortables al interior de las edificaciones. Se interpreta como la falta de incomfort térmico (excesivo calor o frío).

#### **Infraestructura Deportiva**

En este caso, Porto (2021) lo define como la infraestructura deportiva que se compone de la indumentaria, los equipos y las herramientas que son necesarios para la práctica de deportes. Se trata de los productos indispensables para concursar, ya que sin estos no es posible la actividad. En muchos casos, la infraestructura

deportiva se encuentra definido por el reglamento, sobre todo en lo referente a la protección o la seguridad. Sin embargo, en un terreno informal, no todos los objetos son usados debido a que, en ocasiones, no resultan imprescindibles.

### 3.3. Población (criterio de selección), muestra, muestreo, unidad de análisis

Para esta investigación se determinó que la población será el aforo de la infraestructura deportiva Coliseo Cerrado.

**Tabla 1**

Capacidad de aforo del Coliseo Cerrado

Infraestructura deportiva	Aforo
Coliseo Cerrado	4500
<b>TOTAL</b>	<b>4500</b>

*Fuente:* Instituto Peruano del Deporte (IPD), 2022.

**Criterios de Inclusión**, persona que practican deporte y que hacen uso frecuente de las instalaciones en estudio, así como espectadores que estén dispuestos a apoyar la investigación mediante encuestas y utilización de los demás instrumentos.

**Criterios de Exclusión**, ocupantes que no se muestren con disponibilidad a ser parte del estudio.

### Muestra

Si la población en cuestión es finita, se emplea la siguiente fórmula:

$$n = \frac{Z^2 pqN}{E^2(N - 1) + Z^2 pq}$$

**Dónde:**

$n$  : es el tamaño de la muestra

$Z$  : es el nivel de confianza 95%= 1.96

$p$  : es la probabilidad de éxito 95/100=0.95

$q$  : es la probabilidad de fracaso (1-p) =0.05

$E$  : es el nivel de error 5%=0.05

$N$  : es el tamaño de la población=4500 aforo del Coliseo Cerrado.

Para la obtención de la muestra se empleó la siguiente fórmula de población finita con un rango de confianza del 95% para obtener una muestra a partir de la población.

**Cálculo del tamaño de la muestra**

Se reemplaza los datos en la formula y procedemos a desarrollar:

$$n = \frac{(1.96)^2(0.5)(0.5)(4500)}{(0.05)^2(4500 - 1) + (1.96)^2(0.5)(0.5)}$$

$$n = \frac{(3.84)(0.5)(0.5)(4500)}{(0.0025)(4500 - 1) + (3.84)(0.95)(0.5)}$$

$$n = \frac{820.80}{11.25 + 0.18}$$

$$n = \frac{820.80}{11.43}$$

$$n = 71.81 \cong 72 \quad (\text{Respuesta})$$

Al aplicar la fórmula para obtener la muestra para una población finita de 4 500 personas es el sistema de muestreo aleatorio simple, con un rango de confianza del 95% que corresponde a 72 personas.

## **Muestreo**

En el estudio se empleará un muestreo probabilístico aleatorio estratificado. Hace más simple los procedimientos y suele aminorar el fallo de la muestra. Se trata de tomar en cuenta categorías típicas distintas entre sí que posean considerable homogeneidad respecto a alguna característica (Escobar y Bilbao, 2020)

## **Unidad de análisis**

Está compuesta por los usuarios de la infraestructura deportiva Coliseo Cerrado.

### **3.4. Técnicas e instrumentos de recolección de datos, validez y confiabilidad**

Las técnicas ejercidas durante el trabajo serán: el cuestionario, el cual consiste en un conjunto de preguntas respecto a las variables a medir (Sampieri Et. Al., 2003). Así como la observación, que se determina con la supervisión y análisis hecho por el investigador, por medio de la utilización de sus propios sentidos, con o sin la ayuda de instrumentos, o hechos de interés general así como los que tienen lugar espontáneamente (Sierra y Bravo, 1984).

## **Instrumentos**

Los instrumentos empleados en el estudio serán el cuestionario, las fichas de observación, los cuales son métodos de obtención de datos para ser utilizados en la investigación. Los cuestionarios contienen una diversidad de fines y se pueden realizar de diversas formas dependiendo de la metodología escogida y los fines que se esperen lograr. (Malhotra, 2021).

Así como también se usará la cámara termográfica, la cual brinda valores de temperaturas en diversos puntos, teniendo en cuenta que pese a que dos materiales puedan tener la misma temperatura pueden irradiar energía infrarroja con intensidades distintas. (Amperis, 2021)

Así como también se emplearán los estándares de confort térmico, son los requerimientos para que una persona pueda habitar un lugar sin desestabilizar su estado de bienestar. (Covarrubias, 2012).

## Validez

La técnica usada es el análisis de documento y datos obtenidos por la encuesta que se va a realizar en esta presente investigación.

**Tabla 2**

Tabla de validez de datos

Técnica	Instrumento	Información o Fuente
Análisis de Documentos	Encuesta	Norma ISO 7730

*Fuente.* Elaboración propia, 2021.

**Tabla 3**

Tabla de comprobación de validez

Variable	N.º	Especialidad	Promedio de validez	Opinión del experto
Confort Térmico	1	Especialista en Ecología y gestión ambiental	4.9	Puede ser aplicado
	2	Especialista en confort ambiental	4.8	Puede ser aplicado
Infraestructura Deportiva	3	Arquitecto paisajista	4.9	Puede ser aplicado

*Fuente.* Elaboración propia, 2022.

Las herramientas, que constan en dos formularios, fueron sometidos al juicio de distintos profesionales.

## Confiabilidad

### Análisis de confiabilidad de la variable: Confort térmico

**Tabla 4**

Confiabilidad de variable

<b>Resumen del procesamiento de los casos</b>			
		<b>N</b>	<b>%</b>
Casos	Válidos	72	100,00
	Excluidos <sup>(a)</sup>	0	0,00
<b>Total</b>		<b>72</b>	<b>100,0</b>

a. Eliminación basada en las variables de la investigación. *Fuente.* Elaboración propia, 2022.

### Número de preguntas

**Tabla 5**

Confiabilidad del número de preguntas

<b>Estadísticos de fiabilidad</b>	
Alfa de Cronbach	N de elementos
<b>0.749</b>	<b>10</b>

*Fuente.* Elaboración propia, 2022.

## **Análisis de confiabilidad de la variable: Infraestructura deportiva**

**Tabla 6**

Confiabilidad de variable

<b>Resumen del procesamiento de los casos</b>			
		<b>N</b>	<b>%</b>
Casos	Válidos	72	100,00
	Excluidos <sup>(a)</sup>	0	0,00
<b>Total</b>		<b>72</b>	<b>100,0</b>

a. Eliminación por lista basada en todas las variables del procedimiento. *Fuente.* Elaboración propia

## **Numero de preguntas**

**Tabla 7**

Confiabilidad del número de preguntas

<b>Estadísticos de fiabilidad</b>	
Alfa de Cronbach	N de elementos
<b>0.749</b>	<b>10</b>

*Fuente.* Elaboración propia, 2022.

Para calcular la confiabilidad del instrumento a ser aplicado, pasó por el análisis del alfa de Cronbach, para que su valor sea aplicable debe estar lo más cerca posible al 1. De esa forma, la confiabilidad se consiguió al procesar los datos obtenidos de la aplicación de una prueba piloto correspondiente a cada variable; de esta forma, se garantiza la confiabilidad de los instrumentos en la investigación.

De acuerdo con, (George & Mallery, 2003), se tuvo en consideración los puntajes de los resultados del coeficiente de alfa de Cronbach:

- Coeficiente alfa >.9 es excelente
- Coeficiente alfa >.8 es bueno
- Coeficiente alfa >.7 es aceptable
- Coeficiente alfa >.6 es cuestionable
- Coeficiente alfa >.5 es pobre
- Coeficiente alfa <.5 es inaceptable

La fiabilidad del instrumento de la variable confort térmico, se calculó a través del análisis de 30 ítems del test a través del Alfa de Cronbach:

$$\alpha = \frac{k}{k - 1} \left[ 1 - \frac{\sum V_i}{V_t} \right]$$

- Dónde:
- $\alpha$  : Alfa de Cronbach
  - k : Número de ítems
  - $V_i$ : Varianza de cada ítem
  - $V_t$ : Varianza del total

Se reemplaza los datos en la formula y se procede a desarrollar:

k=	20	$\alpha$ =	0.746
$V_i$ =	17.914	$\alpha$ :	El nivel de confiabilidad del uso de los instrumentos es buena (Respuesta)
$V_t$ =	61.592		

### a) Variable 1: Confort Térmico

De acuerdo a los resultados obtenidos se promedió la fiabilidad general de la prueba, lo que dio como resultado 0,75 y al ser mayor a 0,70 se demuestra una fuerte fiabilidad. Fue así que se obtuvo validez de contenido porque representa la definición de todos los ítems de la variable; así como confiabilidad del criterio.

## **b) Variable 2: Infraestructura deportiva**

Para brindar fiabilidad al instrumento empleado y por su misma naturaleza se utilizó la prueba de Kuder Richardson. De acuerdo a esta prueba, las técnicas han dado por resultado coeficientes de confiabilidad de 0.75 y un 78 % de coincidencia; lo cual, respaldó la validez de contenido.

### **Conclusiones**

Las herramientas de recopilación de datos fueron validadas por profesionales, y se aseguró su fiabilidad; y su posterior aplicación, los datos conseguidos fueron encausados para lograr los resultados que han permitido expresar conclusiones y las sugerencias que corresponden en el desarrollo del artículo.

### **3.5. Procedimientos**

Se procedió a analizar las condiciones de confort térmico en el coliseo cerrado, el cual se encuentra en el distrito de morales, mediante las encuestas, fichas de observación, 5 termohigrómetros y una cámara termográfica. Para conseguir información relacionada se procedió a buscar antecedentes que tengan correlación al tema (cambio climático, confort térmico y equipamiento deportivo), en las plataformas de Google scholar y Scielo como principales recursos, de los cuales el segundo en mención es un sitio de revistas científicas de todo el mundo, del que se consiguió la mayor parte de los antecedentes. Para las bases teóricas, la información se obtuvo de autores de diversos campos tales como la arquitectura bioclimática, científicos que estudian los recursos naturales y cambios climáticos, así como también analistas estadísticos del desgaste energético en el cuerpo humano. Al contar con dicha información, se dispuso a rescatar del marco metodológico los instrumentos para ser empleados en el análisis e identificación del estado actual del coliseo cerrado, en los ámbitos de infraestructura y confort térmico, tales como la encuesta, una ficha de observación, cuadros de estándares de confort, termómetros ambientales y cámara termográfica.

### **3.6. Método de análisis de datos**

El método de análisis de los datos recopilados serán hojas de cálculo de Excel para organizar los resultados de la encuesta aplicada, luego se utilizará estadística descriptiva en las tablas y gráficos en los que se recopilan los datos, se mostrarán de manera ordenada y agregada para el propósito de la interpretación correcta.

### **3.7. Aspectos éticos**

Se empleará la guía de preparación de tesis de investigación proporcionada por la Universidad; de manera similar, los derechos de autor serán revocados al citar información de acuerdo con las normas APA y se aplicarán los principios éticos de la organización benéfica, sin maleficencia, autonomía y justicia. Finalmente, se reservarán los datos personales de la muestra de estudio.

## IV. RESULTADOS

### 4.1. Resultados de la Encuesta

Gráfico 01: Nivel de humedad en las instalaciones del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Del gráfico se observa que el 40% de individuos encuestados manifestaron que el nivel de humedad en las instalaciones del Coliseo Cerrado es malo, mientras que el 25% opinó que es muy malo, asimismo un 26% que es aceptable, por otro lado, un 8% de los usuarios encuestados calificó como bueno y sólo el 1% que es muy buena.

Gráfico 02: Cantidad de vegetación circundante al Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 33% de individuos encuestados manifestaron que la cantidad de vegetación circundante al Coliseo Cerrado es aceptable, mientras que el 27% opinó que es malo, asimismo un 19% que es bueno, por otro lado, un 11% de los usuarios encuestados calificó como muy malo y un 10% que es muy bueno.

Gráfico 03: Promoción del reciclaje en el Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: De acuerdo al gráfico se observa que el 55% de individuos encuestados manifestaron que promover el reciclaje en el Coliseo Cerrado es muy bueno, mientras que el 23% opinó que es bueno, asimismo un 8% aceptable, por otro lado, un 8% de los usuarios encuestados calificó como muy malo y un 6% que es malo.

Gráfico 04: Implementación de paneles solares para mejorar el ahorro energético en el Coliseo Cerrado.

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 64% de individuos encuestados manifestaron que implementar paneles solares para mejorar el ahorro energético en el Coliseo Cerrado es muy bueno, mientras que el 18% opinó que es aceptable, asimismo un 11% lo calificó como bueno, por otro lado, un 4% como malo y el 3% que es muy malo.

Gráfico 05: Implementación de biodigestor que genere electricidad y gas metano para el Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 42% de individuos encuestados manifestaron que implementar un biodigestor que genere electricidad y gas metano para el Coliseo Cerrado es muy bueno, mientras que el 27% opinó que es bueno, asimismo un 25% aceptable, por otro lado, un 3% de los usuarios encuestados calificó como muy malo y el restante 3% que es malo.

Gráfico 06: Protección de la cubierta del Coliseo Cerrado ante el impacto solar

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 38% de los usuarios encuestados manifestaron que la protección de la cubierta del Coliseo Cerrado ante el impacto solar es aceptable, mientras que el 25% opinó que es malo, asimismo un 15% bueno, por otro lado, un 14% de los usuarios encuestados calificó como muy malo y un 8% que es muy bueno.

Gráfico 07: Ventilación dentro del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 48% de individuos encuestados manifestaron que la ventilación dentro del Coliseo Cerrado es aceptable, mientras que el 29% opinó que es malo, asimismo un 14% bueno, por otro lado, un 8% de los usuarios encuestados calificó como muy malo y un 1% que es muy bueno.

Gráfico 08: Sensación térmica en el aire del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 38% de individuos encuestados manifestaron que la sensación térmica en el aire del Coliseo Cerrado es aceptable, mientras que el 32% opinó que es malo, asimismo un 18% bueno, por otro lado, un 11% de los usuarios encuestados calificó como muy malo y un 1% que es muy bueno.

Gráfico 09: Higrotérmica dentro del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 42% de individuos encuestados manifestaron que la Higrotérmica dentro del Coliseo Cerrado es mala, mientras que el 33% opinó que es aceptable, asimismo un 12% muy malo, por otro lado, un 10% de los usuarios encuestados calificó como bueno y un 3% que es muy bueno.

Gráfico 10: Forma del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 56% de individuos encuestados manifestaron que la forma del Coliseo Cerrado es aceptable, mientras que el 28% opinó que es bueno, asimismo un 12% malo, por otro lado, un 4% de los usuarios encuestados calificó como muy bueno.

Gráfico 11: Distribución de los ambientes dentro del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 52% de individuos encuestados manifestaron que la distribución de los ambientes del Coliseo Cerrado es aceptable, mientras que el 23% opinó que es bueno, asimismo un 15% malo, por otro lado, un 8% de los usuarios encuestados calificó como muy malo y un 2% que es muy bueno.

Gráfico 12: Estado de la infraestructura deportiva Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 37% de individuos encuestados manifestaron que el estado de la infraestructura deportiva Coliseo Cerrado es malo, mientras que el 36% opinó que es aceptable, asimismo un 16% dijo que es muy malo, por otro lado, un 8% de los usuarios encuestados calificó como bueno y un 3% que es muy bueno.

Gráfico 13: Material de Cobertura del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 43% de individuos encuestados manifestaron que el material de la cobertura del Coliseo Cerrado es malo, mientras que el 31% opinó que es aceptable, asimismo un 15% dijo que es bueno, por otro lado, un 10% de los usuarios encuestados calificó como muy malo y un 1% que es muy bueno.

Gráfico 14: Control del sonido dentro del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 38% de individuos encuestados manifestaron que el control de sonido dentro del Coliseo Cerrado es aceptable, mientras que el 32% opinó que es malo, asimismo un 15% dijo que es bueno, por otro lado, un 12% de los usuarios encuestados calificó como muy malo y un 3% que es muy bueno.

Gráfico 15: Material del piso del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 49% de individuos encuestados manifestaron que el material del piso del Coliseo Cerrado es aceptable, mientras que el 27% opinó que es malo, asimismo un 17% dijo que es bueno y un 7% que es muy malo.

Gráfico 16: Material de los muros del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 60% de individuos encuestados manifestaron que el material de los muros del Coliseo Cerrado es aceptable, mientras que el 19% opinó que es malo, asimismo un 18% dijo que es bueno y otro 3% de los usuarios encuestados calificó como muy malo.

Gráfico 17: Ubicación del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 38% de individuos encuestados manifestaron que la ubicación del Coliseo Cerrado es buena, mientras que el 36% opinó que es aceptable, asimismo un 12% dijo que es mala, otro 12% de los usuarios encuestados calificó como muy buena y un 2% que es muy mala.

Gráfico 18: Estado de las calles que circulan el Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 52% de individuos encuestados manifestaron que el estado de las calles que circulan el Coliseo Cerrado es muy malo, mientras que el 34% opinó que es malo, asimismo un 11% dijo que es aceptable y un 3% que es bueno.

Gráfico 19: Estado de las áreas verdes con las que cuenta el Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 43% de individuos encuestados manifestaron que el estado de las áreas verdes con las que cuenta el Coliseo Cerrado es aceptable, mientras que el 30% opinó que es malo, asimismo un 16% dijo que es muy malo, por otro lado, un 10% de los usuarios encuestados calificó como bueno y un 1% que es muy bueno.

Gráfico 20: Tipo de vegetación utilizado en las inmediaciones del Coliseo Cerrado

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que el 43% de individuos encuestados manifestaron que el tipo de vegetación utilizado en las inmediaciones del Coliseo Cerrado es aceptable, mientras que el 30% opinó que es malo, asimismo un 14% dijo que es bueno, por otro lado, un 12% de los usuarios encuestados calificó como muy malo y un 1% que es muy bueno.

## 4.2. Resultados de la Ficha de Observación

Para el análisis se realizaron a preguntas con escala valorativa a los usuarios en cuanto a su percepción de confort térmico en las instalaciones del Coliseo Cerrado.

- Tabla 8: Información de la infraestructura

DISPOSITIVOS DE CONTROL CLIMÁTICO ACTIVOS EN EL LUGAR	Ninguno	Ventilador	Aire Acondicionado	Enfriador evaporítico	Ventana		Ducto de ventilación
					Alta	Baja	
						X	

Fuente. Elaboración propia, 2022.

Interpretación: En lo que refiere a la información de la infraestructura en cuanto a dispositivos de control climático activos en el lugar solo se encontró ventanas altas.

En cuanto a Información del usuario se recolectaron los siguientes datos para conocer así su percepción del espacio en el que se encontraban.

- Tabla 9: Tiempo que lleva dentro de la Infraestructura deportiva

Menos de 30 minutos	Más de 30 minutos
38%	62%

Fuente. Elaboración propia, 2022.

Interpretación: Se muestra que 38% de usuarios encuestados manifestó que llevaba dentro de las instalaciones menos de 30 minutos y el 62% restante llevaba más de 30 minutos.

- Tabla 10: Actividad que desarrolla

<b>Pasiva</b>	<b>Moderada</b>	<b>Intensa</b>
31%	15%	54%

Fuente. *Elaboración propia, 2022.*

Interpretación: Se observa que un 31% de los usuarios encuestados realizaba actividades pasivas, el 15% tuvo actividad moderada y el 54% restante desarrollaba actividades intensas.

- Tabla 11: Tipo de vestimenta

<b>Muy Abrigado</b>	<b>Abrigado</b>	<b>Normal</b>	<b>Ligero</b>	<b>Muy ligero</b>
		39%	61%	

Fuente. *Elaboración propia, 2022.*

Interpretación: Se observa que un 31% de los usuarios encuestados realizaba actividades pasivas, el 15% tuvo actividad moderada y el 54% restante desarrollaba actividades intensas.

Para determinar la percepción del ambiente interior en la infraestructura deportiva de parte de los usuarios entrevistados se realizaron las siguientes interrogantes:

- Tabla 12: Sensación térmica

	<b>Mucho Frio</b>	<b>Frio</b>	<b>Algo de Frio</b>	<b>Ni calor / ni frío</b>	<b>Algo de calor</b>	<b>Calor</b>	<b>Mucho Calor</b>
<b>DIURNA</b>					16%	28%	16%
<b>NOCTURNA</b>				16%	16%	8%	

Fuente. *Elaboración propia, 2022.*

Interpretación: Se muestra que un 13% del total de usuarios encuestados percibió el lugar con algo de calor, un 28% con calor y un 16% lo valorizó en mucho calor. Mientras que por la noche el 16% dijo no sentir ni calor/ ni frío, el 16% algo de calor y el restante 8% mencionó que sintió calor.

- Tabla 13: Sensación de Humedad

Muy húmedo	Húmedo	Algo húmedo	Normal	Algo seco	Seco	Muy seco
6%	16%	47%	31%			

Fuente. *Elaboración propia, 2022.*

Interpretación: Se muestra que un 6% del total de usuarios encuestados percibió el lugar como muy húmedo, un 16% como húmedo, un 47% lo valorizó en algo húmedo y el 31% restante mencionó que sintió el ambiente normal.

- Tabla 14: Sensación de Ventilación

Mucha ventilación	Mediana ventilación	Ligera ventilación	Ninguna ventilación
	30%	39%	31%

Fuente. *Elaboración propia, 2022.*

Interpretación: Se muestra que un 30% del total de usuarios encuestados percibió el lugar con mediana ventilación, un 39% con ligera ventilación y el 31% restante mencionó no sintió en el ambiente ninguna ventilación.

Se analizó también la preferencia en cuanto a temperatura y ventilación de los usuarios dentro de la infraestructura deportiva.

- Tabla 15: Preferencia de temperatura

Mucho más fresco	Más fresco	Un poco más fresco	sin cambio	con un poco más de calor	con más calor
	23%	47%	30%		

Fuente. *Elaboración propia, 2022.*

Interpretación: Se muestra que un 23% del total de usuarios encuestados preferiría el lugar más fresco, un 39% un poco más fresco y el 30% restante mencionó está conforme con la temperatura existente.

- Tabla 16: Preferencia de Ventilación

<b>Preferiría más ventilación</b>	<b>Sin cambio</b>	<b>Preferiría menos ventilación</b>
<b>77%</b>	<b>23%</b>	

*Fuente. Elaboración propia, 2022.*

Interpretación: Se muestra que un 77% del total de usuarios encuestados preferiría mayor ventilación en el lugar y el 23% mencionó está conforme con la ventilación existente

- Tabla 17: Tolerancia personal

<b>Perfectamente tolerable</b>	<b>Ligeramente tolerable</b>	<b>Tolerable</b>	<b>Intolerable</b>	<b>Extremadamente intolerable</b>
<b>12%</b>	<b>31%</b>	<b>47%</b>	<b>10%</b>	

*Fuente. Elaboración propia, 2022.*

Interpretación: En cuanto a tolerancia personal se obtuvo que un 12% del total de usuarios encuestados percibió el lugar como perfectamente tolerable, un 39% como ligeramente tolerable, un 47% como tolerable y el 10% restante mencionó que era intolerable.

### 4.3. Resultados del estudio con instrumentos de medición, termohigrómetros.

Con el objetivo de obtener resultados más precisos se usó 5 termohigrómetros para medir la temperatura ambiental y el nivel de humedad que posee la infraestructura desde el día 9 de junio a las 00 Hrs hasta el sábado 11 a las 1:03pm.

Gráfico 21: Temperatura, sensación térmica y humedad de CH 1- Noreste.

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que, al comenzar el estudio el día jueves el sensor CH1 captó que la sensación térmica y la temperatura en la infraestructura eran iguales, hasta las 9:19am que la sensación de calor empezó a ser mayor hasta llegar a la 1:30pm donde sobrepasó la temperatura por 4°C, pero a partir de las 8:03pm tanto la sensación térmica como la temperatura coincidían; variación que se replicó al día siguiente teniendo 3.6°C de diferencia a la 1:02pm y al igual que el día jueves la temperatura y sensación térmica volvieron a ser similares a las 6:13pm. Mientras que el día sábado hubo lluvias desde las: 5:03am, lo que causó que no exista distinción entre la sensación térmica y la temperatura como los días anteriores de estudio, siendo así la temperatura máxima alcanzada 25°C a la 1:03pm y la mínima 20.7°C a las 9:57am. En cuanto a los niveles de humedad se observa que por las noches y madrugadas se incrementa, y alrededor del mediodía desciende, alcanzando el día jueves a la 1:34pm un 50% como nivel más bajo y el sábado a las 8:57am a 91% siendo este el nivel más alto del estudio.

Gráfico 22: Temperatura, sensación térmica y humedad de CH 2 - Centro.

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que, al comenzar el estudio el CH2 captó que la sensación térmica y la temperatura en la infraestructura eran iguales, hasta las 9:19am que la sensación de calor empezó a ser mayor hasta llegar a la 1:30pm donde sobrepaso la temperatura por 4.2°C, pero a partir de las 8:03pm tanto la sensación térmica como la temperatura coincidían; variación que se replicó al día siguiente teniendo 3.4°C de diferencia a la 1:02pm y al igual que el día jueves la temperatura y sensación térmica volvieron a ser similares a las 6:13pm. Mientras que el día sábado hubo lluvias desde las: 5:03am, lo que causó que no exista distinción entre la sensación térmica y la temperatura como los días anteriores de estudio, siendo así la temperatura máxima alcanzada 25.2°C a la 12:58pm y la mínima 20.8°C a las 9:59am. En cuanto a los niveles de humedad se observa que por las noches y madrugadas se incrementa, y alrededor del mediodía desciende, alcanzando el día jueves a la 1:30pm un 52% como nivel más bajo y el sábado a las 8:48am a 89% siendo este el nivel más alto del estudio.

Gráfico 23: Temperatura, sensación térmica y humedad de CH 3 - Sureste.

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que, al comenzar el estudio el CH3 captó que la sensación térmica y la temperatura en la infraestructura eran iguales, hasta las 9:19am que la sensación de calor empezó a ser mayor hasta llegar a la 1:30pm donde sobrepasó la temperatura por 3.8°C, pero a partir de las 8:03pm tanto la sensación térmica como la temperatura coincidían; variación que se replicó al día siguiente teniendo 3.6°C de diferencia a la 1:02pm y al igual que el día jueves la temperatura y sensación térmica volvieron a ser similares a las 6:13pm. Mientras que el día sábado hubo lluvias desde las: 5:03am, lo que causó que no exista distinción entre la sensación térmica y la temperatura como los días anteriores de estudio, siendo así la temperatura máxima alcanzada 25°C a la 1:03pm y la mínima 20.7°C a las 9:57am. En cuanto a los niveles de humedad se observa que por las noches y madrugadas se incrementa, y alrededor del mediodía desciende, alcanzando el día jueves a la 1:17pm un 52% como nivel más bajo y el sábado a las 8:58am a 90% siendo este el nivel más alto del estudio.

Gráfico 24: Temperatura, sensación térmica y humedad de CH 4 - Noroeste.

Fuente: Elaboración propia, 2022.

Interpretación: Se observa que, al comenzar el estudio el CH4 captó que la sensación térmica y la temperatura en la infraestructura eran iguales, hasta las 9:19am que la sensación de calor empezó a ser mayor hasta llegar a la 1:30pm donde sobrepasó la temperatura por 4.4°C, pero a partir de las 8:03pm tanto la sensación térmica como la temperatura coincidían; variación que se replicó al día siguiente teniendo 3.9°C de diferencia a la 1:02pm y al igual que el día jueves la temperatura y sensación térmica volvieron a ser similares a las 6:13pm. Mientras que el día sábado hubo lluvias desde las: 5:03am, lo que causó que no exista distinción entre la sensación térmica y la temperatura como los días anteriores de estudio, siendo así la temperatura máxima alcanzada 25.2°C a la 1:03pm y la mínima 20.5°C a las 10:02am. En cuanto a los niveles de humedad se observa que por las noches y madrugadas se incrementa, y alrededor del mediodía desciende, alcanzando el día jueves a la 1:31pm un 52% como nivel más bajo y el sábado a las 8:57am a 90% siendo este el nivel más alto del estudio.

Gráfico 25: Temperatura, sensación térmica y humedad de CH 5 - Suroeste.

Fuente: Elaboración propia, 2022.

Se observa que, al comenzar el estudio el CH5 captó que la sensación térmica y la temperatura en la infraestructura eran iguales, hasta las 9:19am que la sensación de calor empezó a ser mayor hasta llegar a la 1:30pm donde sobrepasó la temperatura por 3.7°C, pero a partir de las 8:03pm tanto la sensación térmica como la temperatura coincidían; variación que se replicó al día siguiente teniendo 3.8°C de diferencia a la 1:02pm y al igual que el día jueves la temperatura y sensación térmica volvieron a ser similares a las 6:13pm. Mientras que el día sábado hubo lluvias desde las: 5:03am, lo que causó que no exista distinción entre la sensación térmica y la temperatura como los días anteriores de estudio, siendo así la temperatura máxima alcanzada 25.3°C a la 1:03pm y la mínima 20.5°C a las 10:10am. En cuanto a los niveles de humedad se observa que por las noches y madrugadas se incrementa, y alrededor del mediodía desciende, alcanzando el día jueves a la 1:27pm un 50% como nivel más bajo y el sábado a las 8:46am a 90% siendo este el nivel más alto del estudio.

#### 4.4. Resultados del confort térmico en función de la temperatura del aire y la humedad relativa.

Con el propósito de comprender de manera más clara los resultados, se trasladaron los datos del estudio a gráficos de puntos de dispersión en los se muestra en qué nivel de confort se encuentra la edificación.

Gráfico 26: Confort térmico en función de la temperatura del aire y la humedad relativa - CH 1 Noreste.

Interpretación: Se observa en el lado derecho superior que los datos de los días jueves y viernes representados en puntos de dispersión se encuentran en el nivel “demasiado caluroso y húmedo”, mientras que los datos del día sábado, en donde existió menores niveles de humedad y temperatura se encuentran bordeando el límite del nivel “todavía confortable”.

Gráfico 27: Confort térmico en función de la temperatura del aire y la humedad relativa  
CH 2 - Centro.

Fuente: *Elaboración propia, 2022.*

Interpretación: Se observa en el lado derecho superior que los datos de los días jueves y viernes representados en puntos de dispersión se encuentran en el nivel “demasiado caluroso y húmedo”, mientras que los datos del día sábado, en donde existió menores niveles de humedad y temperatura se encuentran bordeando el límite del nivel “todavía confortable”.

Gráfico 28: Confort térmico en función de la temperatura del aire y la humedad relativa de CH 3 - Sureste.

Fuente: *Elaboración propia, 2022.*

Interpretación: Se observa en el lado derecho superior que los datos de los días jueves y viernes representados en puntos de dispersión se encuentran en el nivel “demasiado caluroso y húmedo”, mientras que los datos del día sábado, en donde existió menores niveles de humedad y temperatura se encuentran bordeando el límite del nivel “todavía confortable”.

Gráfico 29: Confort térmico en función de la temperatura del aire y la humedad relativa de CH 4 - Noroeste.

Fuente: *Elaboración propia, 2022.*

Interpretación: Se observa en el lado derecho superior que los datos de los días jueves y viernes representados en puntos de dispersión se encuentran en el nivel “demasiado caluroso y húmedo”, mientras que los datos del día sábado, en donde existió menores niveles de humedad y temperatura se encuentran bordeando el límite del nivel “todavía confortable”.

Gráfico 30: Confort térmico en función de la temperatura del aire y la humedad relativa de CH 5 - Suroeste.

Fuente: Elaboración propia, 2022.

Interpretación: Se observa en el lado derecho superior que los datos de los días jueves y viernes representados en puntos de dispersión se encuentran en el nivel “demasiado caluroso y húmedo”, mientras que los datos del día sábado, en donde existió menores niveles de humedad y temperatura se encuentran bordeando el límite del nivel “todavía confortable”.

## V. DISCUSIÓN

Con el objetivo de identificar las características del confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto se realizó la encuesta respecto a los niveles de humedad en las instalaciones del coliseo cerrado. El 65% de los encuestados calificaron el nivel de humedad en las instalaciones del Coliseo Cerrado entre malo y muy malo. Estos resultados son respaldados por Marina (2021) quien menciona que el rango ideal debe mantenerse entre el 40% y el 60%. Si este valor es inferior al 40%, podemos experimentar sequedad de ojos, piel y mucosas, así como enfermedades respiratorias infecciosas como resfriados, gripe y bronquiolitis. Por el contrario, una humedad superior al 60 % puede causar problemas de humedad. Al analizar los resultados se encontró que la infraestructura deportiva Coliseo cerrado carece de un óptimo nivel de humedad ya que la humedad en el lugar llega a obtener hasta un 91% por lo tanto excede por un 31% el máximo aceptable.

De igual manera con el fin de identificar las características del confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto, se llevó a cabo la encuesta respecto a la higrotérmica en las instalaciones del coliseo cerrado, lo cual dio como resultado que el 54% percibe la higrotérmica dentro del coliseo cerrado como mala y muy mala. Estos resultados son respaldados por Brambilla (2022) quien menciona que la higrotérmica consiste en la ausencia de malestar térmico y se obtiene de la combinación de temperatura y humedad en el ambiente. De esta manera podemos decir que la higrotérmica dentro de la infraestructura deportiva Coliseo cerrado es mala, debido a que los niveles de humedad y temperatura que posee el lugar no son los óptimos.

Asimismo, con el fin de analizar el estado actual de la infraestructura deportiva Coliseo cerrado en Tarapoto se realizó la encuesta respecto a la cobertura del Coliseo cerrado, los resultados obtenidos mostraron el disconfort respecto a la cubierta de un 53% de los usuarios encuestados. Según Alvasa (2022) El mejor aislante térmico para techos dependerá de la materialidad de la estructura; es decir, de sus componentes. Además, en la elección influye si se va a colocar en el exterior o en

el interior. De esta manera se puede comprender que el estado actual de la cobertura del coliseo cerrado no cumple con lo necesario para brindar un nivel de satisfacción a los entrevistados.

Por otro lado, para establecer las necesidades de los usuarios respecto al confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto se realizó una ficha de observación, en cuanto a los resultados obtenidos respecto a la sensación de ventilación se comprende que 70% de usuarios expresaron sentir ligera ventilación y ninguna ventilación. Estos resultados son respaldados por Soler (2017) quien menciona que la ventilación de un lugar se rige al Reglamento de Instalaciones Térmicas en los Edificios (RITE). En el cual los requisitos son más estrictos ya que según la zona en la que vivamos y la actividad que se realice, se deben integrar filtros para respaldar que la calidad del aire interior (IDA) cumpla según los parámetros exigidos dentro de la misma normativa. Por lo cual se comprende que la ventilación en las instalaciones del coliseo cerrado no satisface las necesidades de los usuarios respecto al confort térmico ya que posee un mínimo sistema de ventilación que son solo ventanas altas.

Por otra parte, para establecer las necesidades de los usuarios con respecto al confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto se realizó una ficha de observación en la cual se analizó el nivel de tolerancia personal que poseían los usuarios frente a sensación térmica en la infraestructura deportiva coliseo cerrado, los datos obtenidos fueron que el 41% de los encuestados manifestaron que es ligeramente tolerable a intolerable. Este resultado es respaldado por Garza (2014) quien menciona al ser humano como un agente activo dentro del proceso de percepción, teniendo en consideración el entorno como una unidad general sobre la cual se estructura los procesos perceptivos. La inserción se define en un nivel mayor o menor, de los aspectos cognitivos, interpretativos y valorativos dentro de las definiciones sobre la percepción ambiental. Según lo mencionado se alcanza a comprender que cerca del 50% de los usuarios en cuestión perciben la sensación térmica en las instalaciones del coliseo cerrado entre ligeramente tolerable e intolerable.

Con el objetivo de analizar el estado actual de la infraestructura deportiva Coliseo cerrado en Tarapoto se realizó la encuesta a los usuarios en donde se encontró que el 53% de personas encuestadas manifestaron que el estado de la infraestructura deportiva Coliseo Cerrado se encuentra entre malo y muy malo. Estos resultados son respaldados por Samitz (2011) quien menciona que la actividad física (AF) regular es recomendada por sus beneficios para la salud psicofísica. El término AF hace referencia a toda actividad que implica movimiento corporal y gasto energético; por lo cual recomienda también que las actividades se realicen en ambientes adecuados y con equipamientos óptimos para su desarrollo. Al hacer la contrastación del resultado obtenido por la encuesta y lo que menciona Samitz respecto a la importancia de la actividad física en una infraestructura deportiva en buen estado con equipamientos adecuados, se alcanza a discernir que el falente estado en el que se encuentra el coliseo cerrado no es apto para quienes lo frecuentan.

Asimismo, con el objetivo de establecer las necesidades de los usuarios con respecto al confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto se realizó la encuesta a los usuarios en donde se encontró que el 64% de personas encuestadas manifestaron que implementar paneles solares para mejorar el ahorro energético en el Coliseo Cerrado es muy bueno. Estos resultados son respaldados por Arencibia (2016) quien menciona que la energía solar fotovoltaica (ESFV) constituye una fuente de energía renovable, la cual se puede usar en la generación de electricidad por medio del uso de paneles solares fotovoltaicos (PSFV) que convierten la radiación solar en electricidad, haciendo que sea aplicable a diversas actividades de la vida. Así teniendo al sol como primordial fuente de energía del planeta, que mencionada energía se emplea por la naturaleza en sus procesos, es lógico que se usen soluciones con la colocación de los paneles solares constituidos por celdas fotovoltaicas, para que sea eficiente convertir la radiación solar en energía eléctrica. Al contrastar el resultado obtenido en la encuesta y lo que menciona Arencibia se denota la aceptación de los encuestados ante esta propuesta de energía autosustentable y los beneficios que esta trae consigo.

Por otra parte, para establecer las necesidades de los usuarios con respecto al confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto se aplicó la ficha de observación y en lo referente a preferencia de temperatura, el 69% de los encuestados manifestaron que les gustaría que sea más fresco. Este resultado es respaldado por Moislinger (2014) quien menciona que la temperatura es una dimensión física y un prerrequisito fundamental para todas las formas de vida. Las propiedades físicas de la materia dependen de la temperatura. Incluso pequeñas variaciones pueden provocar cambios significativos, como los que se observan al pasar de un estado a otro. La temperatura puede afectar en gran medida el metabolismo de los organismos vivos; Los niveles que son demasiado altos o demasiado bajos pueden alterar las tasas metabólicas, afectar la función de los órganos y dañar los tejidos. Por lo tanto, la temperatura corporal y la temperatura del ambiente corporal son de fundamental importancia para la vida y la salud. Al comparar los resultados obtenidos en la hoja de observación sobre la preferencia de temperatura con los resultados mencionados por Moislinger, se puede dar cuenta de que la instalación de la columna de campo requiere una mejor gestión de los niveles de temperatura.

## VI. CONCLUSIONES

Al determinar el confort térmico en las instalaciones de la infraestructura deportiva coliseo cerrado se encontró que dicha infraestructura no cumple con las condiciones adecuadas para el desarrollo de las actividades inherentes a este campo deportivo.

1. La infraestructura deportiva Coliseo Cerrado no cumple con los estándares de confort térmico dado a que la humedad en el lugar excede el máximo permitido para que un ambiente pueda ser confortable y no cuenta con los espacios adecuados para albergar las diferentes actividades que se realizan en mencionado lugar.
2. La infraestructura deportiva del coliseo cerrado se encuentra en malas condiciones debido a que en los muros presentan grietas que podrían afectar la estructura del edificio, así como la falta de mantenimiento a sus instalaciones presentando un evidente deterioro, pudiendo ser un peligro para los usuarios.
3. Falta de mantenimiento en la infraestructura, ineficiente control de la ventilación, así como excesiva humedad en los espacios y el inadecuado tratamiento de las áreas verdes.

## VII. RECOMENDACIONES

A las autoridades del Instituto Peruano del Deporte y a su vez a la Municipalidad distrital de Morales, se recomienda:

Buscar a profesionales especialistas para mejorar el confort térmico en el coliseo adecuando un sistema de muro trombe y utilizando materiales que ayuden a disipar el calor interior mediante un estudio de la geometría solar de la zona, asimismo trabajar con la envolvente y ventanas del edificio para poder regular la temperatura y humedad interior.

1. Los directivos del IPD conjuntamente con la municipalidad promover concursos arquitectónicos para proponer soluciones que ayuden a disipar el exceso de calor en el coliseo cerrado, como el cambio del material de la cubierta por otro que ayude a disipar el calor ocasionado por los rayos del sol y así mismo se podría usar un deshumidificador para regular los niveles de humedad en el lugar.
2. A las autoridades pertinentes solicitar una planificación adecuada del mantenimiento a las instalaciones del coliseo cerrado, así como una inspección técnica con un profesional para la revisión estructural del coliseo por las grietas que muestra la edificación.
3. A las autoridades pertinentes para la adecuada planificación del mantenimiento interior como exterior y la propuesta de una inspección técnica con respecto a las estructuras y acabados de la mencionada infraestructura deportiva.

Entrevistas a los Especialistas:

		ESPECIALISTA ENCUESTADOS			
		Arq. Arnaldo Cahui	Arq. Nuria Sierralta	Arq. Caleb Pinedo	
CONFORT TÉRMICO	1	¿De qué manera se podría lograr la entalpía dentro de las instalaciones del Coliseo Cerrado?	El proceso termodinámico de la entalpía da parámetros importantes del calor latente y sensible por la cual nos da valores importantes de la energía en diferentes estados del espacio del coliseo.	Para poder lograr primero se debió tomar en cuenta el entorno inmediato, para poder trabajar de una manera más amigable con el entorno. Luego por sus propias características del entorno se puede observar q no hay viento y que el sol cae muy directo, por esa razón el diseño debería de haber tomado en cuenta eso y compensarlo con la materialidad, lo cual no fue así ya que es un proyecto muy cerrado y con una materialidad que no apoya a que se puede generar confort térmico.	Es muy importante hacer un estudio detallado en cuanto a la energía que se pueda obtener mediante un sistema termodinámica favorable en el coliseo, buscando la transformación, conservación y distribución de energía equilibrada al ambiente.
	2	¿De qué manera se podría incentivar el reciclaje de los materiales existentes en el coliseo cerrado para las mejoras del mismo? ¿Cuánto aportaría?	El modelo de la economía circular es un principio fundamental para el proceso del reciclaje, por lo que ya no es solo incentivar si no un derecho fundamental de conservación del planeta.	Creo que poniendo un material alternativo para que asoleamiento de manera indirecta. Y creo que si podría aportar a generar un poco de confort térmico. A su vez el tema acústico es importante saber que material se podría proponer.	Lamentablemente la región aún no cuenta con una fábrica o empresa que procese los materiales reciclables como tal, y la población carece de mucho conocimiento y cultura del mismo. Con un buen taller de especialistas en la materia que enseñen a culturizar el reciclaje aprovechando los tipos de materiales del coliseo y como se podría reusar ello; donde aportaría soluciones con menor impacto ambiental y reducción de consumo de energía eléctrica.
	3	¿Cree usted que sería viable la implementación de un biodigestor que genere electricidad y gas metano para el Coliseo Cerrado? ¿De qué manera aportaría?	Todo aquel proceso de generación de energías limpias, será un buen aporte a la reducción de contaminantes, que afectan al proceso natural del planeta	Si, para el ahorro eficiente energético sería ideal. Pero de todas maneras es importante tomar en cuenta las condiciones espaciales para no tener inconvenientes al momento de diseñar.	Si sería viable la implementación de un biodigestor, donde se aproveche el gas metano emitido dentro de ello y se aproveche para la generación de electricidad y/o funcionamiento de algunos equipos.
	4	¿Qué opina de la idea de implementar Paneles solares en el Coliseo Cerrado? ¿De qué manera aportaría?	La implementación de paneles fotovoltaicos de alta eficiencia es una necesidad para la generación de energía, para el aporte de iluminación que necesita el coliseo Cerrado.	Me parece muy importante porque ser un apoyo para que el propio coliseo tenga mayor actividad y se pueda mejorar y usar con mayor frecuencia el coliseo cerrado.	Los paneles fotovoltaicos son una buena alternativa que hoy en día se está implementando cada vez más dentro de los proyectos, donde aporta mucho tener una eficiencia energética reduciendo el consumo de la electricidad, así mismo reduce el impacto ambiental.
	5	¿De qué manera repercute el asoleamiento en el confort térmico dentro del Coliseo Cerrado? ¿Cómo o mediante qué criterios se podría mejorar?	El asoleamiento repercute según la orientación, transmitancia de materiales, factor de forma, entorno, el clima etc. El asoleamiento tiene más componentes que lo puedan hacer bueno y/o malo para la persona humana, según el control de estas en espacios habitables.	Si repercute, desde la sensación térmica que transmite hasta el propio cambio de ánimo que genera (pesadez por el calor). Creo que una opción muy factible sería arborizar un poco dentro del coliseo para generar un microclima adecuado. Luego ver la forma y la materialidad.	El coliseo carece de un sistema efectivo en cuanto al asoleamiento, ya que la acumulación de calor interno es más de lo indicado, saliendo del porcentaje requerido. Se podría mejorar adecuando un sistema de muro trombe y utilizando materiales que ayuden a disipar el calor interior mediante un estudio de la geometría solar de la zona, asimismo trabajar con la envolvente y ventanas del edificio para poder regular la temperatura y humedad interior.

CONFORT TERMICO	6	¿Qué criterios se deben considerar para mejorar la ventilación del Coliseo Cerrado?	Los criterios de la ventilación son en función a los vientos, factor de forma del coliseo, entorno o ubicación del proyecto etc. Por lo que la ventilación cruzada será importante para el buen confort térmico.	Primero ver la dirección de viento, de acuerdo a eso ver las características de las ventilaciones actuales y reforzarlas y precisar por donde existe mayor viento. O tratar de generar vientos por corredores de aire, o por convección.	Es importante evaluar las ventanas existentes y poder aprovechar la ventilación natural cruzada de la zona o si es posible orientar los vientos mediante la envolvente a utilizar en el edificio, ya sea con celosías que ayuden a dicho funcionamiento u otro tipo de sistema.
	7	¿De qué manera se podría llegar al confort higrotérmico en el Coliseo Cerrado?	El confort higrotérmico, llegara cuando se maneje las temperaturas adecuadas en los espacios del coliseo cerrado, considerando los principios de la arquitectura sostenible	Usando los criterios de diseño optimo, según el clima y su entorno inmediato y según las necesidades que tendrá (ya que como coliseo no está aperturado siempre entonces muy importante tomar en cuenta el uso la dirección de viento y asoleamiento para poder de acuerdo a eso proponer)	Sera necesario hacer un climograma de B. Givoni para determinar el estado de confort que necesita el edificio del coliseo cerrado, y en base a ello plantear los sistemas y materiales a utilizar que permita y ayude a obtener el porcentaje requerido para el confort higrotérmico durante las cuatro estaciones del año.
	8	¿Qué instrumentos sugiere adicionar a la investigación aparte de la encuesta, entrevista y ficha de observación, así como instrumentos técnicos cómo: cámara termográfica y termómetros ambientales?	El manejo de instrumentos de medición tendrá que estar en función al alcance de las variables investigación.	Si, termómetros ambientales y hacer una medición constante para precisar las deficiencias.	Creo que lo mencionado es lo más requerido para obtener una buena información y si da el caso hacer un estudio con un climograma de B. Givoni.
INFRAESTRUCTURA DEPORTIVA	9	¿Qué criterios arquitectónicos deben considerarse al elegir la forma de un coliseo?	El factor de forma del coliseo está definido por que se materializo, los criterios de cambios de forma están en función a los resultados reales del coliseo.	Generar corredores de aire desde la parte externa del coliseo para direccionarlo hacia adentro, a su vez precisar las aberturas laterales en los muros y por la parte superior usar un sistema convección o efecto chimenea para ventilar de manera natural.	La tipología de las formas del coliseo ya está estipulada por la actividad u función que se desarrolla desde hace siglos atrás, en caso de ser uno nuevo, se podría optar una conceptualización de la zona buscando tener características de las formas tipológicas y funciones que cumplen, o para uno existente adaptarlas dándole un sistema adecuado que se requiera para un mejor funcionamiento.
	10	¿Qué materiales para cobertura, control acústico, tabiquería y piso considera usted los adecuados para el Coliseo cerrado de Tarapoto?	La cobertura está en función del factor "U" y el manejo de temperaturas interiores, lo acústico esta función de las reverberaciones del sonido que pueda generarse y los pisos tendrán que estar en función a las necesidades de los actores del coliseo, el proyecto y sus cambios será integral.	Puede ser una mezcla de lana de vidrio con drywall, para generar control acústico, se puede usar falso techo o falsa pared para generar confort.	En cuanto a cobertura el calaminón aluzin tipo sándwich térmico color blanco para disipar el calor y los rayos del sol, para control acústico un sistema de paneles como cielo raso que impidan salir los sonidos en su totalidad y tabiquería de la misma manera que ayuden a tener las dos funciones de termoacústico ya se con la ayuda de un muro trombe, y los pisos los materiales que exige la normativa para la cancha circulaciones y butacas.

		ESPECIALISTAS ENCUESTADOS	
		Dimensión	Preguntas
		Arq. Tadeo Campos - Esp. En Paisajismo	
INFRAESTRUCTURA DEPORTIVA	1	Arquitectónico	¿Qué criterios arquitectónicos deben considerarse al elegir la forma de un coliseo?  La forma dependerá desde el concepto o idea principal, la capacidad de comportamiento climático y térmico y el comportamiento acústico.
	2	Estructural	¿Qué materiales para cobertura, control acústico, tabiquería y piso considera usted los adecuados para el Coliseo cerrado de Tarapoto?  De cobertura deberían ser termo acústicos, no solo para que disipen el sonido proveniente del exterior, sino también que puedan atenuar el incremento de temperatura. Interiormente se debe trabajar cielos rasos, existen diversos materiales que permiten una mejor insonorización y reverberación del sonido en el espacio, además es importante mencionar que la forma de dicho cielo raso dependerá de un estudio acústico del lugar. Con respecto a tabiquerías, dependerá de la ubicación, siendo probablemente lo más adecuado para muro perimetrales albañilería confinada tipo sándwich con placas aislantes en el interior; para muros interiores se puede trabajar, desde muros de albañilería confinada (principalmente para espacios con flujos de circulación intensa) y para espacios más aislado o con poco flujo de personas, tabiquería prefabricada. En pisos también dependerá de la zona, si es para los espacios deportivos o área central se tiene que trabajar en base a normativas internacionales y nacionales, si es para área de flujos bajo, medio o intenso, se puede ser flexible en el uso de materiales y se pueden optar por los comerciales.
	3	Entorno	¿Qué opina de la vegetación existente en los exteriores del Coliseo Cerrado? ¿Cómo se podría mejorar?  Es deficiente, la vegetación no solo debe tener un fin estético sino también de confort térmico, se debe considerar árboles con poca densa y extensa, no solo plantas tapizantes, herbáceas o arbustivas.
	4		¿Cree usted que la infraestructura vial aporta al paisaje del coliseo cerrado?  Probablemente, ya que en el contexto se puede apreciar algunos árboles ubicados de manera lineal, adyacentes a las vías de circulación vehicular y peatonal. Es importante mencionar que la vegetación brinda una serie de servicios ecosistémicos, tanto de regulación por la sombra que aporta, de provisión, ya que sirve de refugio y alimentación para la flora local y cultural, porque refuerza la identidad cultural como ciudad de la selva.
	5		¿Qué opina de que el Coliseo cerrado está ubicado en una zona de residencia?  No es lo recomendable, ya que genera un impacto en la zona, tanto por el intenso flujo cuando se dan diversos eventos como por el grado de contaminación acústica que genera a la que es sometida la población que vive en el contexto inmediato.

## CARTA A EXPERTO PARA EVALUACIÓN DE CUESTIONARIO

Tarapoto, 03 de mayo de 2022

Arq. Ms. Arnaldo Cahui Galarza

Asunto: **Evaluación de cuestionarios de investigación**

Sirva la presente para expresarles mi cordial saludo e informarles que estoy elaborando mi tesis titulada: **“El Confort térmico y su influencia en la infraestructura deportiva Coliseo cerrado en Tarapoto, 2022”** a fin de optar el: Título profesional de arquitecto.

Por ello, estoy desarrollando un estudio en el cual se incluye la aplicación de dos cuestionarios: El primero, denominado: **“Cuestionario de Confort térmico”** y el segundo: **“Cuestionario de infraestructura deportiva”** por lo que, le solicito tenga a bien realizar la validación de este instrumento de investigación, que adjunto, para cubrir con el requisito de “Juicio de expertos”.

Esperando tener la acogida a esta petición, hago propicia la oportunidad para renovar mi aprecio y especial consideración.

Atentamente,

---

**Cuestionario de Confort térmico**

**Datos informativos:**

Sexo:            M                       F

Estimado colaborador, a continuación, se presenta un cuestionario con la finalidad de conocer su opinión sobre el estudio del confort térmico de la infraestructura deportiva Coliseo Cerrado de la Ciudad de Tarapoto; por lo cual, es de suma importancia que lea con atención cada enunciado y valiéndose de su criterio y en honor a la verdad marque el puntaje según al que usted crea conveniente; además, se le garantiza guardar la confidencialidad y anonimato de sus respuestas.

	Dimensiones	Ítems	Indicadores	Valoración				
				1	2	3	4	5
CONFORT TÉRMICO	Factores ambientales	1	La sensación de humedad en las instalaciones del Coliseo cerrado					
		2	La cantidad de vegetación circundante al Coliseo cerrado					
		3	Reutilizar materiales del Coliseo cerrado como incentivo al reciclaje					
		4	Implementar paneles solares para mejorar el ahorro energético en el Coliseo Cerrado					
		5	Implementar un biodigestor que genere electricidad y gas metano para el Coliseo cerrado					
	Sensación Térmica	6	La protección de la cubierta del Coliseo cerrado ante el impacto solar					
		7	La ventilación dentro del Coliseo cerrado es la adecuada para brindar confort					
		8	La sensación térmica en el aire del Coliseo cerrado es la adecuada para brindar confort					
		9	La sensación térmica en su cuerpo, dentro del Coliseo cerrado se siente confortable					

**Escala valorativa:**

Muy malo = 1    malo = 2                      aceptable = 3    bueno = 4                      muy bueno = 5

**Cuestionario de infraestructura deportiva**

	Dimensiones	Ítems	Indicadores	Valoración

### Matriz de validación de juicio de expertos

#### VALIDACIÓN DEL INSTRUMENTO DE INVESTIGACIÓN MEDIANTE JUICIO DE EXPERTOS

DATOS GENERALES:

Apellidos y nombres del especialista	Cargo e institución donde labora	Nombre del instrumento	Autor(a) del instrumento
SIERRALTA ESCUDERO NURIA	Arquitecta/ UCV Docente	INSTRUMENTO DE INVESTIGACIÓN MEDIANTE JUICIO DE EXPERTOS	Lady Alexandra Gonzales Rios
Título del estudio: El Confort térmico y su influencia en la infraestructura deportiva Coliseo cerrado en Tarapoto, 2022			

ASPECTOS DE VALIDACIÓN:

Coloque un ASPA (X) de acuerdo con la siguiente calificación: 1 (No cumple con el criterio), 2 (Bajo Nivel), 3 (Moderado nivel), 4 (Alto nivel) criterios de validez propuesto por W de Kendall (Escobar & Cuervo, 2008).

CONFORT TÉRMICO	DI-MEN-SION	INDICADORES	ITEMS	OPCIONES DE RESPUESTA	SUFICIENCIA				CLARIDAD				COHERENCIA				RELEVANCIA			
					1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4
Factores Ambientales		Humedad	La sensación de humedad en las instalaciones del Coliseo cerrado	Muy Malo		X				X				X					X	
		Vegetación	La cantidad de vegetación circundante al Coliseo cerrado	Malo		X					X				X					
				Aceptable																

Sensación térmica	Reciclaje	Reutilizar materiales del Coliseo cerrado como incentivo al reciclaje	Bueno			X				X				X				X	
		Ahorro energético (paneles solares / biodigestor)	Implementar paneles solares para mejorar el ahorro energético en el Coliseo Cerrado	Muy bueno			X				X			X					X
			Implementar un biodigestor que genere electricidad y gas metano para el Coliseo cerrado					X			X			X					X
	Sensación térmica	Asoleamiento	La protección de la cubierta del Coliseo cerrado ante el impacto solar	Muy Malo			X				X			X				X	
		Ventilación	La ventilación dentro del Coliseo cerrado es la adecuada para brindar confort	Malo			X			X			X					X	
		Temperatura del aire	La sensación térmica dentro del coliseo cerrado es la adecuada para brindar confort térmico	Aceptable			X		X			X						X	
		Higrotérmia	La sensación térmica en su cuerpo, dentro del Coliseo cerrado se siente confortable	Muy bueno			X				X			X				X	

	Procede su aplicación.
X	Procede su aplicación previo levantamiento de las observaciones que se adjuntan.
	No procede su aplicación.8

OPINIÓN DE APLICABILIDAD: En el indicador de temperatura del aire en el ítem la sensación térmica del aire del coliseo cerrado es la adecuada para brindar confort, creo que debería ser la sensación térmica dentro del coliseo cerrado es la adecuada para brindar confort térmico.

## CARTA A EXPERTOS PARA EVALUACIÓN DE CUESTIONARIO

Tarapoto, 05 de junio de 2022

Arq. Julio César Ruiz Ramírez.

Asunto: **Evaluación de cuestionarios de investigación**

Sirva la presente para expresarles mi cordial saludo e informarles que estoy elaborando mi tesis titulada: **“El Confort térmico y su influencia en el equipamiento deportivo Coliseo cerrado en Tarapoto, 2022”** a fin de optar el: Título profesional de arquitecto.

Por ello, estoy desarrollando un estudio en el cual se incluye la aplicación de dos cuestionarios: El primero, denominado: **“Cuestionario de Confort térmico”** y el segundo: **“Cuestionario de equipamiento deportivo”** por lo que, le solicito tenga a bien realizar la validación de este instrumento de investigación, que adjunto, para cubrir con el requisito de “Juicio de expertos”.

Esperando tener la acogida a esta petición, hago propicia la oportunidad para renovar mi aprecio y especial consideración.

Atentamente,

---

Lady Alexandra Gonzales  
RíosDNI N° 73999443

**Adjunto:**

- *Título de la investigación*
- *Matriz de consistencia (problemas generales y específicos, objetivos generales y específicos, hipótesis general y específicos, metodología, población y muestra)*
- *Cuadro de operatividad de variables*
- *Instrumentos*

**TABLA 34**

**MATRIZ DE CONSISTENCIA.**

**EL CONFORT TÉRMICO Y SU INFLUENCIA EN EL EQUIPAMIENTO DEPORTIVO COLISEO CERRADO EN TARAPOTO, 2022**

Formulación del problema	Objetivos	Hipótesis		Técnica e Instrumentos								
<p><b>Problema general:</b> ¿De qué manera influye el confort térmico en la infraestructura deportiva Coliseo Cerrado?</p> <p><b>Problemas específicos:</b></p> <ul style="list-style-type: none"> <li>¿Cuáles son los aspectos a evaluar para conocer el nivel de confort térmico actual de la infraestructura deportiva?</li> <li>¿Cuáles son las necesidades de la infraestructura deportiva Coliseo cerrado para alcanzar el confort térmico?</li> <li>¿Cuáles son las características arquitectónicas que debe cumplir una infraestructura deportiva para cubrir las necesidades de confort térmico de sus usuarios?</li> </ul>	<p><b>Objetivo general:</b> Determinar el confort térmico en la infraestructura deportiva coliseo cerrado.</p> <p><b>Objetivos específicos:</b></p> <ul style="list-style-type: none"> <li>Identificar las características del confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto.</li> <li>Analizar el estado actual de la infraestructura deportiva Coliseo cerrado en Tarapoto.</li> </ul> <p>Establecer las necesidades de los usuarios con respecto al confort térmico en la infraestructura deportiva Coliseo cerrado en Tarapoto.</p>	<p><b>Hipótesis general:</b> El confort térmico influye positivamente en la infraestructura deportiva Coliseo Cerrado Tarapoto, 2022.</p>		<p><b>Técnica</b></p> <ul style="list-style-type: none"> <li>- Encuesta</li> <li>- Observación</li> </ul> <p><b>Instrumentos:</b></p> <ul style="list-style-type: none"> <li>- Cuestionario</li> <li>- Ficha de Observación</li> <li>- Entrevista</li> <li>- Sensores de calor</li> <li>- Estándares de confort térmico</li> </ul>

**TABLA 35**

**MATRIZ DE OPERACIONALIZACIÓN DE VARIABLES**

Variable	Definición conceptual	Definición operacional	Dimensiones	Indicadores	Escala de medición
Confort Térmico	Manual de Diseño para edificaciones Energéticamente eficientes en el Trópico, María Eugenia Sosa y Geovanni Siem:	La variable en estudio será operacionalizada en tres dimensiones y se aplicará un instrumento para su medición, además será sometido a juicio de expertos.	Factores Ambientales	<ul style="list-style-type: none"> <li>• Humedad.</li> <li>• Vegetación.</li> <li>• Reciclaje.</li> <li>• Ahorro energético (Paneles solares/biodigestor)</li> </ul>	Ordinal
	El confort térmico es un concepto subjetivo que expresa el bienestar físico y psicológico del individuo cuando las condiciones de temperatura, humedad y movimiento del aire son favorables a la actividad que desarrolla.		Sensación Térmica	<ul style="list-style-type: none"> <li>• Asoleamiento.</li> <li>• Ventilación.</li> <li>• Temperatura del aire.</li> <li>• Higrotérmia.</li> </ul>	
Equipamiento Deportivo	Sports and Architecture, Benjamin S. Flowers:  comprende el diseño de espacios para la práctica de deportes y para la realización de competencias deportivas las cuales son presenciadas por gran número de espectadores.	La variable en estudio será operacionalizada en tres dimensiones y se aplicará un instrumento para su medición, además será sometido a juicio de expertos.	Arquitectónico	<ul style="list-style-type: none"> <li>• Forma.</li> <li>• Funcionalidad.</li> <li>• Equipamiento.</li> </ul>	Ordinal
			Estructural	<ul style="list-style-type: none"> <li>• Material de cobertura.</li> <li>• Aislamiento acústico.</li> <li>• Material del piso.</li> <li>• Material de tabiquería.</li> </ul>	
			Entorno	<ul style="list-style-type: none"> <li>• Infraestructura vial.</li> <li>• Ubicación.</li> </ul>

Tabla 36

**Cuestionario de Confort térmico**

**Datos informativos:**

Sexo: M  F

Estimado colaborador, a continuación, se presenta un cuestionario con la finalidad de conocer su opinión sobre el estudio del confort térmico de la infraestructura deportiva Coliseo Cerrado de la Ciudad de Tarapoto; por lo cual, es de suma importancia que lea con atención cada enunciado y valiéndose de su criterio y en honor a la verdad marque el puntaje según al que usted crea conveniente; además, se le garantiza guardar la confidencialidad y anonimato de sus respuestas.

**Escala valorativa:**

Muy malo = 1      malo = 2      aceptable = 3      bueno = 4      muy bueno = 5

	Dimensiones	Ítems	Indicadores	Valoración				
				1	2	3	4	5
CONFORT TÉRMICO	Factores ambientales	1	La sensación de humedad en las instalaciones del Coliseo cerrado					X
		2	La cantidad de vegetación circundante al Coliseo cerrado					X
		3	Reutilizar materiales del Coliseo cerrado como incentivo al reciclaje					X
		4	Implementar paneles solares para mejorar el ahorro energético en el Coliseo Cerrado					X
		5	Implementar un biodigestor que genere electricidad y gas metano para el Coliseo cerrado					X
	Sensación Térmica	6	La protección de la cubierta del Coliseo cerrado ante el impacto solar					X
		7	La ventilación dentro del Coliseo cerrado es la adecuada para brindar confort					X
		8	La sensación térmica en el aire del Coliseo cerrado es la adecuada para brindar confort					X
		9	La sensación térmica en su cuerpo, dentro del Coliseo cerrado se siente confortable					X

### Cuestionario de infraestructura deportiva

	Dimensiones	Ítems	Indicadores	Valoración				
				1	2	3	4	5
INFRAESTRUCTURA DEPORTIVA	Arquitectónico	1	La forma del Coliseo cerrado			X		
		2	La distribución de los ambientes dentro del Coliseo cerrado			X		
		3	El estado de la infraestructura del Coliseo cerrado		X			
		4	El material de cobertura del coliseo cerrado		X			
	Estructural	5	El control del sonido dentro del Coliseo cerrado	X				
		6	El material del piso del Coliseo cerrado			X		
		7	El material de los muros del Coliseo cerrado			X		
	Entorno	8	La ubicación del coliseo cerrado			X		
		9	El estado de las calles que circundan el coliseo cerrado	X				
		10	El estado de las áreas verdes con las que cuenta el Coliseo cerrado			X		
		11	El tipo de vegetación utilizado en las inmediaciones del Coliseo cerrado			X

### **Declaratoria de Autenticidad del Asesor**

Yo, BARTRA GOMEZ JACQUELINE, docente de la FACULTAD DE INGENIERÍA Y ARQUITECTURA de la escuela profesional de ARQUITECTURA de la UNIVERSIDAD CÉSAR VALLEJO SAC - TARAPOTO, asesor de Tesis titulada: "El Confort térmico y su influencia en la Infraestructura deportiva

Coliseo cerrado en Tarapoto, 2022", cuyo autor es GONZALES RIOS LADY ALEXANDRA, constato que la investigación tiene un índice de similitud de 11.00%, verificable en el reporte de originalidad del programa Turnitin, el cual ha sido realizado sin filtros, ni exclusiones.

He revisado dicho reporte y concluyo que cada una de las coincidencias detectadas no constituyen plagio. A mi leal saber y entender la Tesis cumple con todas las normas para el uso de citas y referencias establecidas por la Universidad César Vallejo.

En tal sentido, asumo la responsabilidad que corresponda ante cualquier falsedad, ocultamiento u omisión tanto de los documentos como de información aportada, por lo cual me someto a lo dispuesto en las normas académicas vigentes de la Universidad César Vallejo.
